PROFESSIONAL PROFILE

QA Engineer Jr. with hands-on experience built through both training and independent projects. I work on functional and E2E testing, REST API validation, and test automation with Python, pytest, and Selenium, as well as process automation with n8n workflows that integrate APIs, databases (PostgreSQL), and AI models. I design test cases, manage defects end to end, from reporting to re-testing, and work in Agile/Scrum environments. My background in customer service gave me a deep understanding of end-user needs and frustrations; in QA, this translates into an impact-oriented perspective: identifying defects that directly affect the customer experience and prioritizing the ones that matter most.

TECHNICAL SKILLS

Test Automation: Python, pytest, requests, Selenium
Process Automation: n8n (workflows, webhooks, API and AI model integrations), Docker Compose
API Testing: Postman, API collections, REST, JSON, HTTP status codes
Databases: SQL (queries and data validation), PostgreSQL
Defect Management: JIRA — bug reporting, tracking, and lifecycle, test evidence, bug log on GitHub
Version Control: Git, GitHub
Testing Process: Test case design and execution, regression testing, functional testing, equivalence classes, boundary values, negative testing, requirements analysis, E2E testing, re-testing, defect triage, exploratory testing
Tools: Chrome DevTools, PyCharm
Methodologies: Agile / Scrum
Languages: Spanish (native) · English: basic reading of technical documentation (APIs, JSON, QA tools)

TECHNICAL PROJECTS

QA Engineer – Job Search Agent — n8n, AI & E2E Testing — Independent project *2026*

Built and tested a Telegram bot that searches several job sources, matches openings against the user's profile, and alerts them about the ones that fit.

- Designed and built 8 n8n workflows that coordinate the whole system: invitation-based sign-up, résumé parsing, follow-up questions to complete the profile, scheduled job searches, a daily email summary, and error alerts.
- Integrated Telegram, a FastAPI service, PostgreSQL, file storage, and AI models (Groq, with Gemini as a fallback), all running in containers with Docker Compose.
- Defined the system rules: the AI never invents profile data, and when something is missing, the bot asks instead of guessing.
- Ran a 32-case E2E test plan with two real users and documented 36 bugs and findings with evidence and triage. Closed at 32/32 passing after fixing and re-testing every bug.
- Used 182 pytest tests as a regression suite, validated data with SQL in PostgreSQL, and worked with Gitflow (branches, pull requests, and a tagged release).

Technologies: n8n · FastAPI · PostgreSQL · Docker · Groq/Gemini · pytest · Git/GitHub · Code developed with AI assistance (Claude) · Repository and video demo: github.com/ariveraandrea1-ctrl/job-search-agent

QA Engineer – Shopify QA Portfolio — Manual & Automation Testing — Independent project *2026*

- Designed and executed a manual test plan (18 test cases) on a Shopify store: catalog, cart, and checkout, with 3 documented findings.
- API automation with Postman: 7 Admin API endpoints, ~17 assertions, including negative cases (422 errors) and business-calculation verification.
- UI automation with Selenium and Python: search, cart, and full checkout flow, including handling nested payment fields inside iframes.
- Identified and documented a technical finding: inconsistency between API and UI in inventory validation.

Technologies: Python · Selenium · Postman · JSON · Git/GitHub · Repository: github.com/ariveraandrea1-ctrl/shopify-qa-portfolio

QA Engineer – Urban Grocers / Order and Go — API Testing — TripleTen *2025*

- Designed and executed 80+ test cases: positive, negative, boundary, and equivalence.
- Automated validations (users and kits) with Python, pytest, and requests.
- Reported 30+ critical defects in JIRA, including server-side validation gaps.

Technologies: Python · pytest · requests · Postman · JIRA · JSON · HTTP

EDUCATION

QA Engineer — TripleTen *2025 – 2026*

Intensive technical training in software quality assurance, test automation, and agile methodologies, oriented toward real-world development environments.

Bootcamp projects: Urban Grocers (API testing), Urban Scooter (backend and database), and Urban Routes (functional testing and web automation with Selenium).

Applied AI with Claude — Smart4AI and Ruta N*2026*

12-hour bootcamp on using Claude in real projects.

AI Engineer Course — Código Facilito*2026*

Foundations and learning path for the AI Engineer role.

ADDITIONAL EXPERIENCE

Customer Service — Perro Negro, Colombia*2023 – 2026*

- Handled an average of 40 customer requests per shift in a high-volume environment, maintaining order accuracy and clear communication.
- Coordinated with the bar and billing teams to reorganize workflow, reducing bar-related wait times by approximately 70%.
- Identified recurring operational error patterns and proposed process adjustments, reducing complaints and improving customer experience.

Customer Service — Bancolombia, Colombia*2019 – 2022*

- Handled an average of 100 daily inquiries via chat and calls in a high-volume banking environment, maintaining accuracy in the information provided.
- Optimized case management and use of internal tools, reducing customer response times by approximately 40%.
- Identified recurring error patterns and process improvement opportunities, escalating critical cases to the relevant teams.
- Strengthened attention to detail and analytical thinking, skills I now apply directly to defect identification in QA.
