Professional Profile

QA Engineer Jr. with hands-on experience built through training projects in functional testing, REST API validation, and test automation with Python, pytest, and requests. Practical knowledge of test case design, defect management in JIRA, and requirements analysis in Agile/Scrum environments. Hands-on experience in web, backend, and database (PostgreSQL) testing. My background in customer service gave me a deep understanding of end-user needs and frustrations; in QA, this translates into an impact-oriented perspective: identifying defects that directly affect the customer experience and prioritizing the ones that matter most.

Technical Skills

Test Automation: Python (beginner), pytest (beginner), requests (beginner), Selenium (basic-intermediate level)

API Testing: Postman, API collections, REST, JSON, HTTP status codes

Databases: SQL (queries and data validation), PostgreSQL

Defect Management: JIRA — bug reporting, tracking, and lifecycle, test evidence

Version Control: Git, GitHub

Testing Process: Test case design and execution, regression testing, functional testing, equivalence classes, boundary values, negative testing, requirements analysis

Tools: Chrome DevTools, PyCharm

Methodologies: Agile / Scrum

Languages: Spanish (native) · English: basic reading of technical documentation (APIs, JSON, QA tools)

Technical Projects

QA Engineer – Shopify QA Portfolio — Manual & Automation Testing — Personal project 2026

- Designed and executed a manual test plan (18 test cases) on a Shopify store: catalog, cart, and checkout, with 3 documented findings.
- API automation with Postman: 7 Admin API endpoints, ~17 assertions, including negative cases (422 errors) and business-calculation verification.
- UI automation with Selenium and Python: search, cart, and full checkout flow, including handling nested payment fields inside iframes.
- Identified and documented a technical finding: inconsistency between API and UI in inventory validation.

Technologies: Python · Selenium · Postman · JSON · Git/GitHub · Repository: github.com/ariveraandrea1-ctrl/shopify-qa-portfolio

QA Engineer – Urban Scooter — Backend & DB Testing — TripleTen 2026

- End-to-end quality assurance for a scooter-rental platform: backend, database, and APIs.
- Validated REST API endpoints and HTTP responses with Postman.
- Wrote SQL queries in PostgreSQL to verify data integrity and consistency.
- Analyzed backend logs to identify system errors.
- Validated complete order and delivery flows end-to-end.
- Automated end-to-end tests with Selenium and Python for key platform flows.
- Reported and documented defects in JIRA with reproducible evidence.

Technologies: Python · Selenium · PostgreSQL · SQL · Postman · JIRA · Git/GitHub · REST APIs

QA Engineer – Urban Grocers / Order and Go — API Testing — TripleTen 2025

- End-to-end testing of Kits and Order and Go services via Postman, based on formal backend requirements.
- Designed and executed 80+ test cases: positive, negative, boundary, and equivalence.
- Executed tests on POST, GET, and DELETE endpoints; validated JSON and HTTP error handling.
- Automated validations (users and kits) with Python, pytest, and requests.

- Reported 30+ critical defects in JIRA, including server-side validation gaps.

Technologies: Python · pytest · requests · Postman · JIRA · JSON · HTTP

QA Engineer – Urban Routes — Web Functional Testing — TripleTen

2025

- Designed and executed functional tests for booking flows, automatic calculations, and UI.
- Cross-platform and cross-device testing; defect documentation in JIRA.

Technologies: Postman · JIRA · Chrome DevTools

Education

QA Engineer — TripleTen

2025 – Jul. 2026

Intensive technical training in software quality assurance, test automation, and agile methodologies, oriented toward real-world development environments.

- Functional and manual testing focused on user experience.
- Test case design and execution, requirements analysis, and test coverage.
- REST API testing with Postman: endpoint validation, JSON responses, and HTTP status codes.
- SQL and PostgreSQL queries for database data validation.
- Basic test automation with Python, pytest, and Selenium.
- Incident management and bug lifecycle with JIRA.
- Version control with Git and GitHub.

Additional Experience

Customer Service — Perro Negro, Colombia

2023 – 2026

- Handled an average of 40 customer requests per shift in a high-volume environment, maintaining order accuracy and clear communication.
- Coordinated with the bar and billing teams to reorganize workflow, reducing bar-related wait times by approximately 70%.
- Identified recurring operational error patterns and proposed process adjustments, reducing complaints and improving customer experience.

Customer Service — Bancolombia, Colombia

2019 – 2022

- Handled an average of 100 daily inquiries via chat and calls in a high-volume banking environment, maintaining accuracy in the information provided.
- Optimized case management and use of internal tools, reducing customer response times by approximately 40%.
- Identified recurring error patterns and process improvement opportunities, escalating critical cases to the relevant teams.
- Strengthened attention to detail and analytical thinking, skills I now apply directly to defect identification in QA.
